

Web-based presentation tools—Intermediate

Let's discuss

A Read the text and answer the questions.

These days many **presentation tools** are web-based. This means that you can save them online. Online presentations are generally interactive and dynamic. Music, videos, sound and links can easily be added to slides in a presentation. This makes them more interesting. Lots of people can contribute to an online presentation, making them good collaborative projects. They can then be shared by sending a link in an email.

1. Have you ever made a presentation?
2. What software/online tool did you use?
3. Where did you save your presentation?
4. Can you think of some advantages of using a web-based presentation tool?

Let's analyse

A Look at two examples of presentations. Answer the questions in pairs or groups.

TIPS
WHAT?
WHERE?
MATERIAL...

B

1. Look at example A. What is the presentation about?
2. What are the names of these sports?
3. What would you expect to find in this presentation?
4. Look at example B. Choose one of the sports shown in example A and try to make a sentence using the key words shown to help you.
5. How can images make a presentation more interesting?
6. What other elements could help to make this presentation more interesting?

Let's do it!

- Step 1** Go online and search for extreme sports. Find a sport which interests you. It doesn't matter whether you are familiar with the sport or not.
- Step 2** Create a simple outline of a presentation, making sure to include important information such as material needed, where the sport can be practised, etc.
- Step 3** Now that you have chosen a sport, go online and find a presentation-creating tool.
- Step 4** Create your presentation. Remember to use images to represent your idea! Of course, you will need to add some text too!
- Step 5** Save your presentation and share it with your teacher and classmates.
