

Guide to the categories on the cards

Use this guide to explain the categories on the cards to children in your class. Be ready to use L1, if necessary, and to extend or simplify the explanations according to the age and level of the children.

Mummy's tummy:

Baby mammals develop inside their mother's body. The babies are born after a certain length of time. This process is called gestation.

It's different for birds. The female bird lays eggs. If the eggs are fertilized, baby birds develop inside the eggs. The baby birds hatch after a certain length of time. This process is called incubation.

The category 'Mummy's tummy' measures both processes in months. The numbers on the cards show the nearest number of months for each animal.

Weight at birth:

This number is an average, as some baby animals weigh more or less than their brothers and sisters. This category is in kilos.

Independence:

Some baby animals stay with their parents for years. Other baby animals have families of their own quite soon. Occasionally, parents abandon their babies and the babies look after themselves. Independence measures how quickly baby animals grow up and look after themselves. The score for independence is out of 10. The higher the number, the earlier the animal begins to look after itself.

Mischief:

Some baby animals are very lively and naughty. Mischief measures how energetic and adventurous a young animal is. The score for mischief is out of 30. The higher the number, the more mischievous the animal is.

Cuteness:

All the baby animals in the pack are cute. Cuteness reflects how sweet and adorable a young animal is. Cuteness is a subjective category which children may or may not agree with. The score for cuteness is out of 5. The higher the number, the cuter the animal.

<p>Squirrel monkeys have got short, grey and orange fur and long tails. The skin around their ears and eyes is white. Their mouth and nose are black. Squirrel monkeys live in large groups in the tropical forests of South America. They eat fruit, insects, seeds, leaves, nuts and eggs. Infants can climb from birth.</p>	<p>Gorillas live in groups in the tropical forests of Africa. They eat leaves and fruit and sometimes travel huge distances looking for food every day. Infants ride on their mother's back for the first four months of their life. When gorillas grow up, they leave the group to form or join other families.</p>	<p>Elephants are the world's largest land mammals. They live in Africa and Asia. Elephants have got trunks which they use to eat grass, leaves and branches of trees. Elephants also use their trunks to drink, play, swim and stay cool. Baby elephants depend on adults to teach them how to survive.</p>

<p>White tigers have got white fur with black stripes. They are good at swimming but not very good at climbing. White tigers are solitary animals and hunt at night. They eat other animals, such as cows, pigs and deer. Newborn cubs are small and blind. They don't hunt until they are 18 months old.</p>	<p>In some countries pigs are domestic animals and live on farms. There are also pigs, called wild boars, which live in forests and mountains. Pigs are intelligent and social animals. They are also clean. Pigs eat plants and meat. Newborn piglets can have as many as 8-12 brothers and sisters!</p>	<p>Grizzly bears live in North America. They eat plants, meat and fish. Female grizzly bears give birth to tiny cubs in winter. The cubs stay with their mother for 2 years learning how to survive. They grow up to be fierce hunters which can run at 48 kilometres an hour and eat 40 kilos of food a day.</p>																														

Baby animals

<p>Giraffe <small>TOP TRUMPS</small></p>  <p>Calf</p> <table border="1"> <tr><td>Mummy's tummy (months)</td><td>15</td></tr> <tr><td>Weight at birth (kilos)</td><td>53.1</td></tr> <tr><td>Independence</td><td>6</td></tr> <tr><td>Mischief</td><td>15</td></tr> <tr><td>Cuteness</td><td>3</td></tr> </table> <p>Baby giraffes are almost 2 metres tall at birth. They spend most of the first few weeks lying down to avoid attack by predators. Giraffes live in Africa. They are very sociable and share land and watering holes with other animals. Giraffes eat leaves and twigs from the tops of trees.</p>	Mummy's tummy (months)	15	Weight at birth (kilos)	53.1	Independence	6	Mischief	15	Cuteness	3	<p>Duck <small>TOP TRUMPS</small></p>  <p>Duckling</p> <table border="1"> <tr><td>Mummy's tummy (months)</td><td>1</td></tr> <tr><td>Weight at birth (kilos)</td><td>0.2</td></tr> <tr><td>Independence</td><td>7</td></tr> <tr><td>Mischief</td><td>5</td></tr> <tr><td>Cuteness</td><td>5</td></tr> </table> <p>There are many different types of ducks. Some ducks are brown and others are brightly coloured. Ducks love water and live near ponds, rivers and oceans. They eat grass, seeds, insects, snails and fish. Newly hatched ducklings cannot fly for several weeks and are in danger from predators.</p>	Mummy's tummy (months)	1	Weight at birth (kilos)	0.2	Independence	7	Mischief	5	Cuteness	5	<p>Kangaroo <small>TOP TRUMPS</small></p>  <p>Joey</p> <table border="1"> <tr><td>Mummy's tummy (months)</td><td>1</td></tr> <tr><td>Weight at birth (kilos)</td><td>0.2</td></tr> <tr><td>Independence</td><td>8</td></tr> <tr><td>Mischief</td><td>26</td></tr> <tr><td>Cuteness</td><td>2</td></tr> </table> <p>Australia's largest mammal is the kangaroo. <p>Holstein cows are large black and white cows originally from the Netherlands. Holstein cows live on dairy farms in many countries in the USA and Europe. They eat grass and corn. They are famous for the amount of milk they produce. Calves drink their mother's milk until they are 8-9 weeks old.</p>	<p>Owls live in most regions of the world. They sleep during the day and hunt mice, rabbits, birds and insects at night. Owls have got large eyes, curved beaks and strong claws. They are almost silent when they fly. Owls do not make nests and the fledglings hatch from eggs at different times.</p>	<p>Ostriches are large birds from Africa. They can run at 70 kilometres an hour but they can't fly! They eat grass, seeds, leaves and insects. Ostrich eggs are very big and weigh more than a kilo. When the chicks hatch, it is usually the male who defends the chicks and teaches them how to feed.</p>
